Metering Sytems & LACT Units

WeamcoMetric designs, fabricates, and delivers all types and sizes of metering systems for the pipeline, offshore, and petrochemical industries.

These metering units can be a simple single run PD Meter Loading Skid to large multiple meter run pipeline custody transfer skids with on-skid provers and sampling.

WeamcoMetric also manufactures Lease Automatic Custody Transfer (LACT) Units for crude oil applications. All units are custom designed to meet your application and comply with API Specification 11N.

Some photos are provided to show examples of metering systems we have supplied to various customer's specifications. All of our systems are Project Managed from proposal and design concept, to shipment, with approval drawings, purchasing, fabrication, calibration and testing in between, which ensures "quality" and "on-time" performance.
